APPLICATION NOTE

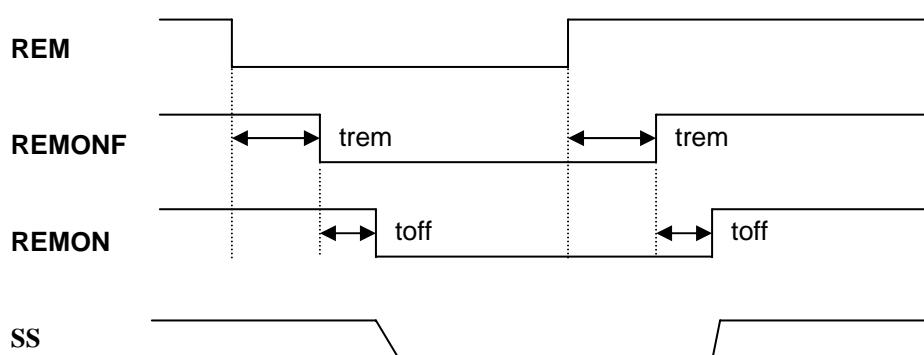

1. Input impedance:

Pin No.	Pin Name	Input impedance
1	V33	52KΩ
2	V5	81KΩ
3	V12	52KΩ
4	PT	24 KΩ+4.6 KΩ

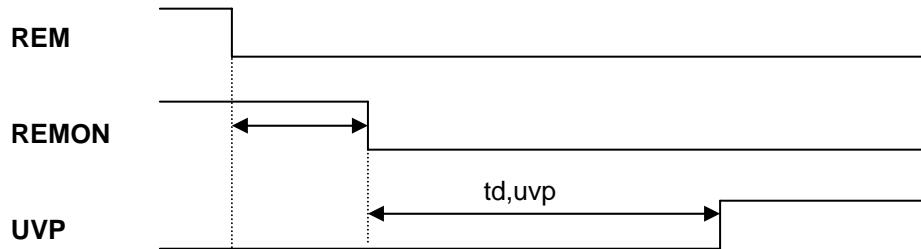

2. Sawtooth OSC. Function:

3. REMOTE ON/OFF :

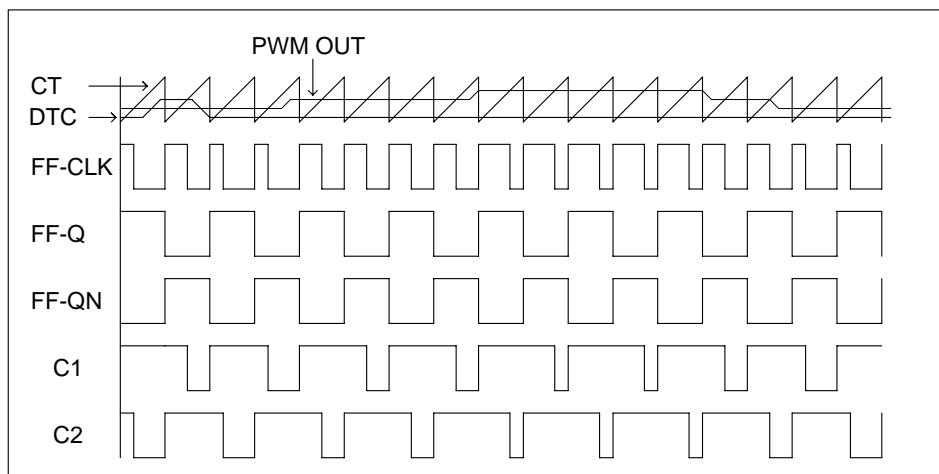

4. Under Voltage Protection Delay Time :

5. Pulse Width Modulation Block :

The output pulse width modulation is generated by comparison of the saw-tooth waveform from the capacitor C_T to the feedback of the voltage.

Therefore, an increase in feedback control signal amplitude cause a linear decrease of the output pulse width. Also, the SS(DTC and Soft-Start) limits the output pulse width. The timing diagram is shown as below:

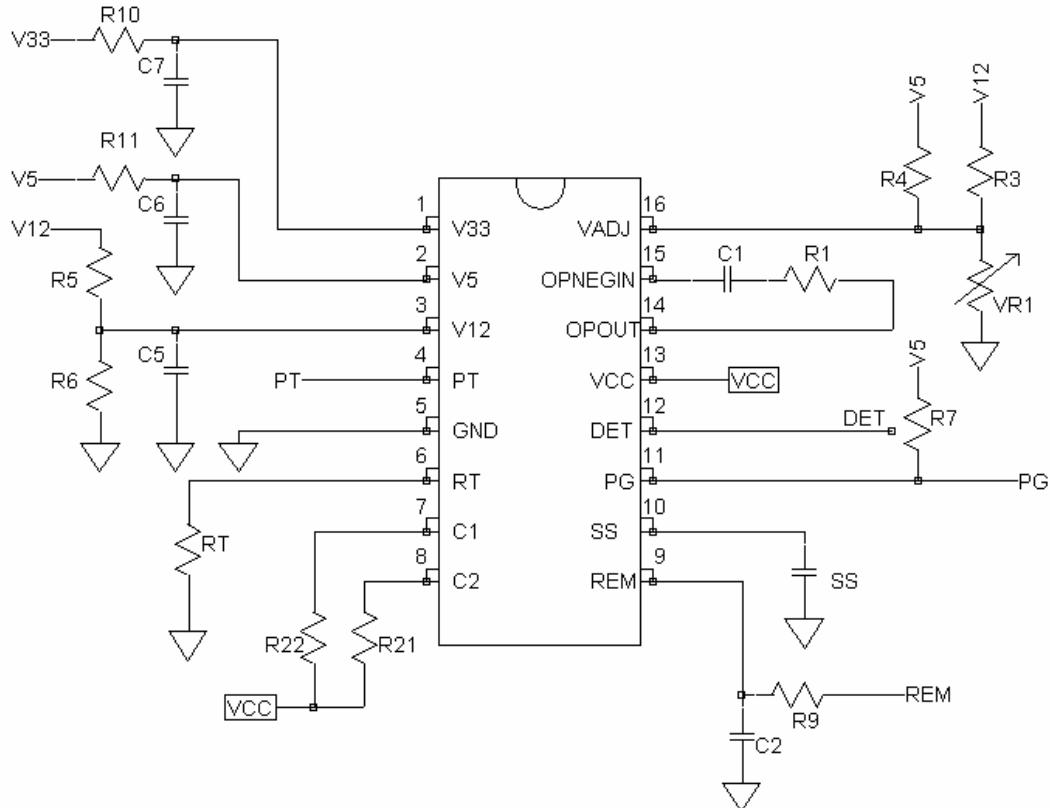

6. The function of "PT":

This signal is prepared for extra OVP/OPP ($V_{PT} > 1.28V$) or another Disable Under Voltage Protection function ($V_{PT} < 0.62V$)

7. Reference Application Circuit:

8. In some application power system, adding an external resistor (R9) could reduce the peak value spike from the environments to pin 9 (REM) and avoid pin 9 (REM) damaged by the external noise.
